

Technical Data Sheet

Product	<b>Mouse IgG2b Isotype Control DyLight<sup>®</sup> 488</b>
Cat. Number/Size	<b>L4-692-C100</b> <b>0.1 mg</b>
	<b>For Research Use Only.</b>
	<b>Not for use in diagnostic or therapeutic procedures.</b>

---

Clone	MPC-11
Format	DyLight <sup>®</sup> 488
Negative species	Mouse, Rat, Human
Application	FC (QC tested), IHC(P), IHC(F), ICC, WB
Application details	Negative control: The reagent is intended as an isotype control to establish the amount of non-specific antibody binding. For your particular experiment, use the same concentration of this control antibody as the recommended working concentration of the antigen-specific antibody. Also, when working with prediluted antibodies, dilute the isotype control to the same concentration as is the concentration of the antigen-specific antibody in the prediluted antibody solution you are using. If under particular experimental conditions the background signal of the isotype control is too high (usually when working concentrations of used antibodies are above 10 µg/ml of incubation mixture), change the conditions of your experiment to reduce the background.
Excitation laser	blue (488 nm)
Isotype	Mouse IgG2b kappa
Specificity	This mouse IgG2b (kappa) monoclonal antibody (clone MPC-11) reacts with an epitope irrelevant for a variety of resting, activated, live, and fixed human, mouse, and rat tissues.
Immunogen	KLH-coupled trinitrophenol

---

Concentration	0.1 mg/ml
Preparation	Purified antibody is conjugated with DyLight <sup>®</sup> 488 NHS ester under optimum conditions and unconjugated antibody and free fluorochrome are removed by size-exclusion chromatography.
Formulation	Stabilizing phosphate buffered saline (PBS), pH 7.4, 15 mM sodium azide
Storage and handling	Store at 2-8°C. Protect from prolonged exposure to light. Do not freeze.
